Creating Value

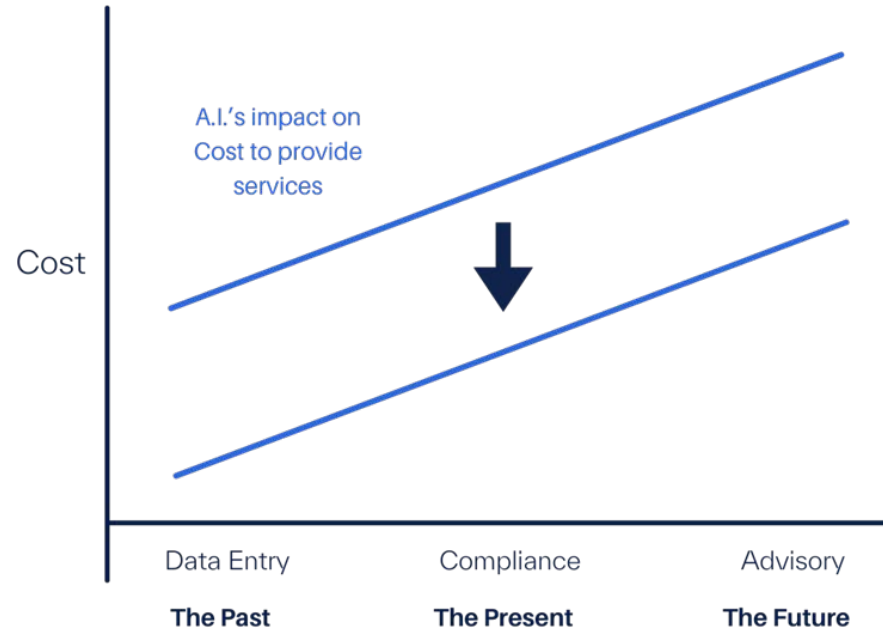

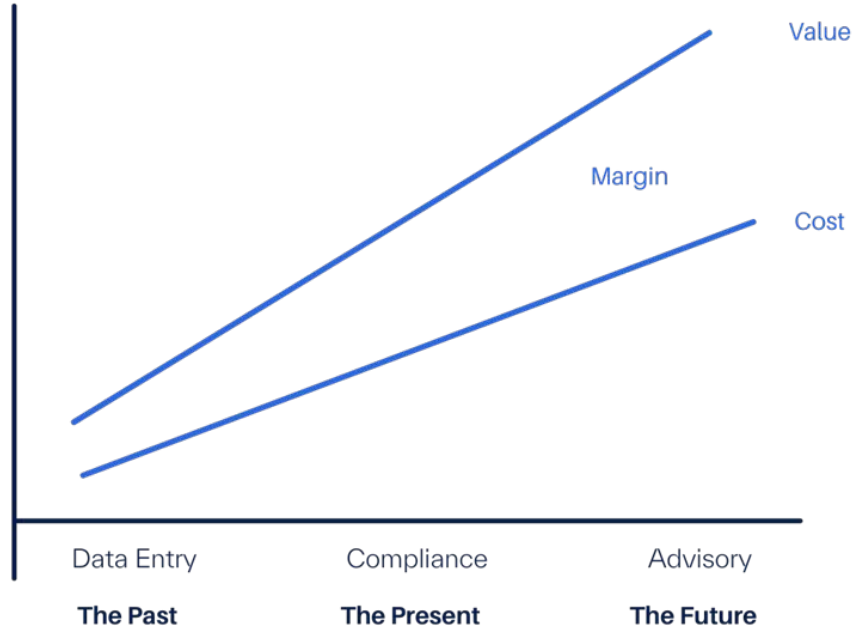

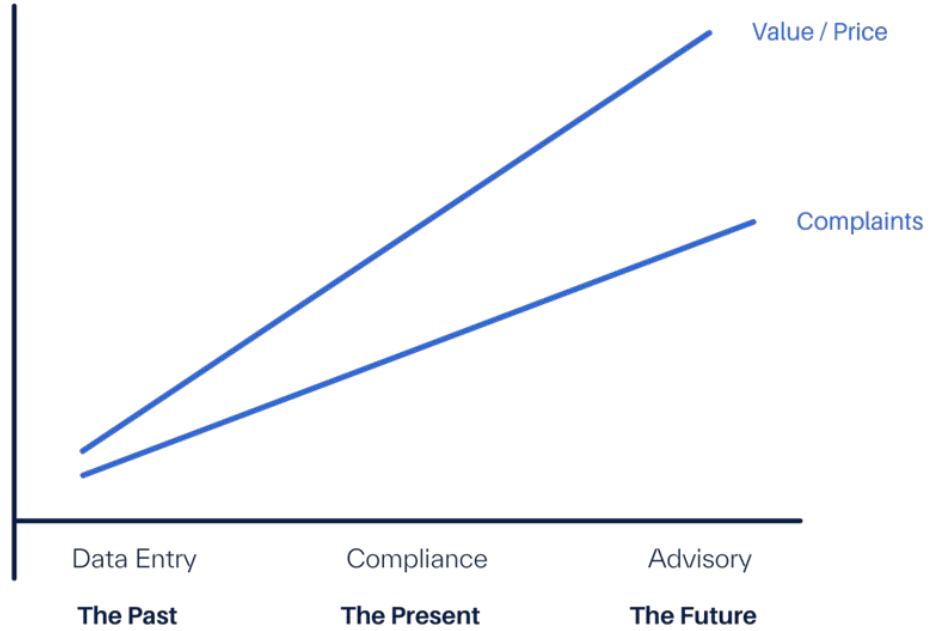

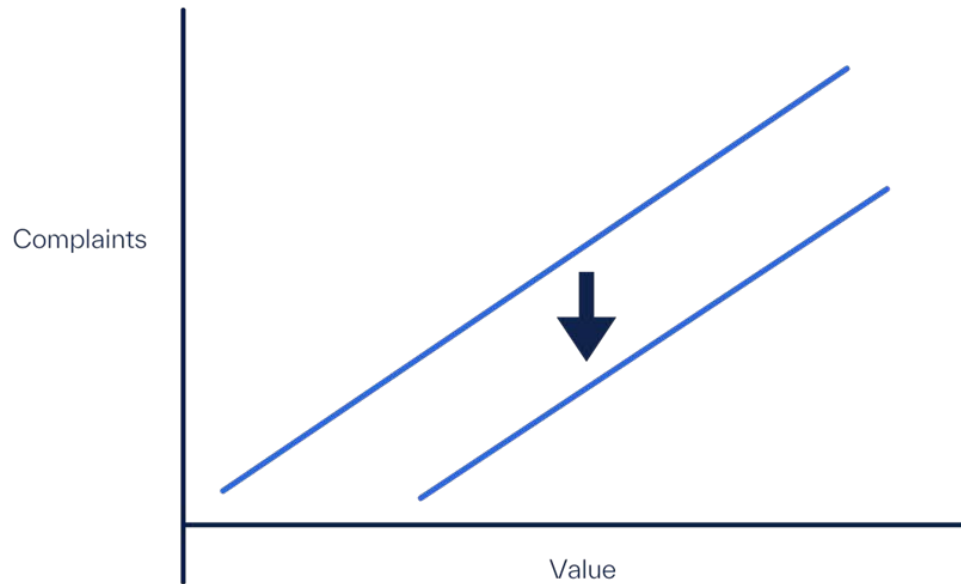

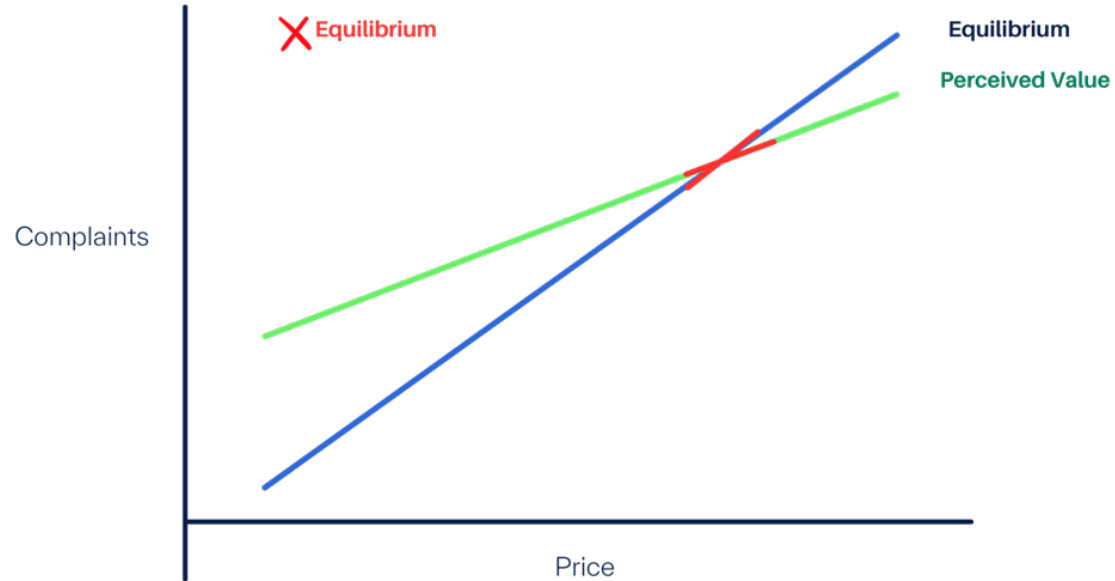

RELATIONSHIP BETWEEN PRICING AND CUSTOMER COMPLAINTS

Principles

- 1) Clients value information about the future more than they do about the past
- 2) A.I. is pushing down the costs of all services, but most essentially low value services (data analysis, data manipulation)
- 3) Humans are better at predicting the future than A.I.
- 4) Even if they get better at predicting the future than humans, one can imagine that humans will not accept advice from an A.I. model
- 5) Absent economies of scale, as the costs of providing services come down, more small firms will be able to avoid the high costs of entry to the profession and compete, especially on the low end of services
- 6) To remain relevant, we must move forward to advisory

Chat Bots and Image Generators

We all know ChatGPT and Midjourney and they're kind

Every tool in the universe (including Intuit) is getting their own natural language processor and chat bots within them

1. "Can you reorganized this data for me?"
2. "Can you explain the new tax proposals for me?"
3. "Can you pull the balance sheet from 12/31/2022 and compare it to the prior year?"
4. "Can you analyze these two tax returns and let me know how it compares to last year?"

Natural language image generator

galaxy in a cape of cofee, background flowers, a plate with cakes, a cake, chocolates :: Liquify :: sparklecure vibrant Opal Pearlescent:: incredibly detailed and complex, gourmet photography, professional studio photography, hyper-maximalist, elegant, hyper-realistic, super-detailed, dynamic pose, hyper-realistic, 3D, photo-realistic, ultra-photo-realistic, complex Details, particles, deep focus, detailed texture, high resolution, beautiful, 32k, --ar 9:16 --v 5.1 --v 5 - Image #2

Voice Bots

The same as a natural language processor but uses your voice

Challenges:

- The amount of nuance you can slip into a written message is vast.
- A voice memo is hard to edit and 'submit'
- Written text is standardized to a degree – voices are wide ranging

Pros:

- Hands free
- Potentially much faster

Video Avatars

- Allows you to create a “Digital Twin” and allow it to record new content of yourself using only natural language
- Translate current videos into dozens of different language
- Requires you to upload your likeness to an A.I. tools database
- Allows for ‘customization at scale’

Agents

These are the tools that will actually push around the data on your desktops, machines and clouds. They will be able to provide inputs like mouse movements and keyboard entries

These will be useful when matched with a natural language processor to describe common tasks that need to be handled

E.g.

“Can you please connect to a remote display on my laptop”

“Can you please login to my general ledger and download these 10 clients financial statements?”

“Can you please log into our tax software and print the 2023 partnership tax return for XYZ, LLC?”

“Can you download the updated forecasts for the next quarter for YZX, Inc?”

*** CVA = CHAT BOTS, VOICE BOTS, AGENTS

“Practice GPT, can you please consult our CRM and check which clients have an upcoming deadline related to XYZ. Can you please use an agent to pull those clients tax returns/financial statements and analyze which of them trigger the filing requirement above. Please write an email to the appropriate clients that explains the requirement in summary and attach the appropriate financial statements. Please also use my avatar to record a video version of the email for those that prefer a video explainer. Can you generate and few images to include in the video explainer so that the video isn’t too boring? Finally, please send me a csv of all of the clients that will receive an email and embed the PDFs in the csv so I can review who will be receiving the email before I send it out. Please let me know when everything is ready, alert my associate, and remind me two days from now if I haven’t gotten back to you. Can you please put 2 hours on me and my associates calendar on a Thursday afternoon to review the details, and make sure to reserve a conference room for us and insert a zoom link in case we need to invite a remote employee.”
